

The aims of Networking in education and research, 2

We started our reflection on the opportunities to constitute a network in the field of education and research by organizing the first working week from 9th to 13th December 2019 at the University of Poitiers.

As a result of our working sessions, we have established the agenda for future activities that we have not been able to put in practice due to the health crisis that has affected the whole world. Hoping that better times are coming, we would like to relaunch our activities and organize the 2nd Staff Training Week, which will aim to advance our initial project.

Most scientists and university professors know that networking is important for success, whether in their research or teaching. Good networking creates spaces where scientists and professors are in position to exchange ideas, methodological or scientific approaches and to build new projects.

Building a network takes time. That is why collaboration becomes very important instrument to strengthen research, but also to stimulate knowledge sharing inside the network.

To increase the cooperation among the E+ KA171 partner universities and to establish a network in a field of sciences and technology as well as in a field of Human sciences, the University of Poitiers as program's coordinator is going to organize a 2nd Staff Training Week dedicated on Networks and networking collaboration in the HEI.
